overdose. The compounds simultaneously elicit dopamine receptor agonist and somatostatin receptor agonist effects in vivo with enhanced biological activity over the native somatostatin and dopamine analogues alone. The present sequence is that of a peptide which was used to produce the somatostatin-dopamine chimeric analogues of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel somatostatin agonist, useful for treating Cushing's syndrome, hyperparathyroidism, Paget's disease, hyperinsulinism, gastrinoma and Zollinger-Ellison syndrome, characterized by alkylation of amide

               cancer, psoriasis, hypotension, panic attacks, scleroderma, smail bowel obstruction, gastrosephageal reflux, ducdenogastric reflux, Grave's disease, polycystic ovary disease, upper gastrointestinal bleeding, pancreatic pseudocysts, pancreatic ascites, leukaemia, meningioma, cancer acchexia, acromegaly, restenosis, hepatoma, lung cancer, melanoma, inhibiting the accelerated growth of a solid tumour and decreasing body weight, treating insulin resistance, Syndrome X, prolonging the survival of pancreatic cells, fibrosis, hyperlipidaemia, hyperamylinaemia, hyperprolactinaemia and prolactinomas. This sequence represents a peptide of a somatostatin agonist compound of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Osteopathic; cytostatic; antidiarrhoeic; antiinflammatory; antipsoriatic; hypertenstive; dermatological; antithyroid; immunomodulator; vasotropic; antilipaemic; somatostatin agonist; Cushing's syndrome; gonadotropinoma; hyperparathyroidism; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel somatostatin agonists, typically characterised by alkylation of the amide nitrogen, or its pharmaceutically acceptable salt. The novel somatostatin agonists are technic for binding one or more of human somatostatin subtype receptors 1,-2,-3,-4 and -5, and for eliciting a somatostatin agonist effect, by administering a somatostatin agonist or a pharmaceutically acceptable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel somatostatin agonist, useful for treating Cushing's syndrome, hyperparathyroidism, Paget's disease, hyperinsulinism, gastrinoma and Zollinger-Ellison syndrome, characterized by alkylation of amide
                                                                                                                                                                                                                                                                     Gaps
syndrome, pancreatitis, Crohn's disease, systemic sclerosis, thyroid

The invention relates to novel somatostatin agonists, typically characterised by alkylation of the amide nitrogen, or its pharmaceutically acceptable salt. The novel somatostatin agonists are useful for binding one or more of human somatostatin subtype receptors 1,-2,-3,-4 and -5, and for eliciting a somatostatin subtype receptors candinistering a somatostatin agonist of a pharmaceutically acceptable and including the somatostatin agonist are captable calt of it to a recipient in need of it. The somatostatin agonists are useful for treating a disease or condition in a human or other animal, religing Cushing's syndrome, gonadorrophinoma, hyperparathyroidism, paget's disease, VIPoma, nesidioblastosis, hyperinsulinism, gastrinoma, collinger-Ellison syndrome (Apins) and other conditions, irritable bowel syndrome, pancreaticis, and other conditions, irritable bowel syndrome, pancreating, and other conditions, irritable bowel syndrome, pancreating, and other conditions, irritable bowel syndrome, pancreating ascites, solaroderma, small bowel concer, psoriasis, hypotension, panc attacks, scleroderma, small bowel cancer, psoriasis, hypotension, pancreatic ascites, lenkaemia, meningioma, cancer cachexia, acromegaly, restencesis, hepatoma, lung cancer, melanoma, inhibiting the accelerated growth of a solid tumour and decreasing body weight, treating insulin resistence, Syndrome X, prolonging the survival and concerned to the pancreatic cells, fibrosis, hyperligidaemia, hy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Osteopathic; cytostatic; antidiarrhoeic; antiinflammatory; antipsoriatic; hypertenstive; dermatological; antithyroid; immunomodulator; vasotropic; antilipaemic; somatostatin agonist; Cushing's syndrome; gonadotropinoma; hyperparathyroidism; cancer.

The invention relates to novel somatostatin agonists, typically characterised by alkylation of the amide nitrogen, or its characterised by alkylation of the amide nitrogen, or its pharmaceutically acceptable salt. The novel somatostatin agonists are useful for binding one or more of human somatostatin subtype receptors 1,-2,-3,-4 and -5, and for eliciting a somatostatin agonist effect, by administering a somatostatin agonist or a pharmaceutically acceptable salt of it to a recipient in need of it. The somatostatin agonists are useful for treating a disease or condition in a human or other animal, including Cushing's syndrome, gonadotropinoma, hyperparathyroidism, paget a disease, vipoma, nesidioblastosis, hyperinsulinism, gastrinoma, 2011inger-Ellison syndrome, hypersecretory diarrhoe related to acquired immunodeficiency syndrome, hypersecretory diarrhoe irritable bowel syndrome, pancreatitis, Crohn's disease, systemic sclerosis, thyroid cancer, psoriasis, hypotension, panic attacks, sclerosis, thyroid cancer, psoriasis, hypotension, panic attacks, sclerosis, thyroid cancer, psoriasis, panicatics, leuksemia, meniagioma, cancer achexis, acromegaly, restenosis, hepatoma, lung cancer, melanoma, inhibiting the accelerated growth of a solid tumour and decreasing body weight, treating insulin resistance, Syndrome X, prolonging the survival of pancreatic cells, fibrosis, hyperlipidaemia, hyperamylinaemia, hyperprolactinaemia and prolactinomas. This sequence represents a peptide of a somatostatin agonist compound of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Osteopathic, cytostatic, antidiarrhoeic, antiinflammatory; antipsoriatic; hypertenstive; dermatological; antithyroid; immunomodulator; vasotropic; antilipaemic; somatostatin agonist; Cushing's syndrome; gonadotropinoma;
                                                        Novel somatostatin agonist, useful for treating Cushing's syndrome, hyperparathyroidism, Paget's disease, hyperinsulinism, gastrinoma and Zollinger-Ellison syndrome, characterized by alkylation of amide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The invention relates to novel somatostatin agonists, typically characterised by alkylation of the amide nitrogen, or its characterised by alkylation of the amide nitrogen, or its characterised by alkylation of the amide nitrogen, or its pharmaceutically acceptable salt. The novel somatostatin agonists are useful for binding one or more of human somatostatin agonist effect, by administering a somatostatin agonist or a pharmaceutically acceptable amid to fit to a recipient in need of it. The somatostatin agonists are useful for treating a disease or condition in a human or other animal, including Cushing's syndrome, gonadorropinoma, hyperparathyroidism, reget's disease, VIPoma, nesidioblastosis, hyperinsulinism, gastrinoma, 20-llinger-Bilison syndrome (AIDS) and other conditions, irritable bowel syndrome, pancreatitis, Crohn's disease, systemic solerosis, thyroid cancer, psoriasis, hypotension, panic attacks, seleroderma, small bowel obstruction, gastroesophageal reflux, duodenogastric reflux, Grave's disease, polycystic ovary disease, upper gastrointestinal bleeding, pancreatic ascites, leukaemia, meningioma, cancer cachexia, acromegaly, restenosis, hepatoma, lung cancer, melanoma, cancer cachexia, acromegaly, restenosis, hepatoma, lung cancer, melanoma, cancer cachexia, acromegaly growth of a solid tumour and decreasing polycytic control of a solid tumour and decreasing control of the college of the college
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   weight, treating insulin resistance, Syndrome X, prolonging the survival of pancreatic cells, fibrosis, hyperlipidaemia, hyperamylinaemia, hyperprolactinaemia and prolactinomas. This sequence represents a peptide of a somatostatin agonist compound of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Osteopathic; cytostatic; antidiarrhoeic; antiinflammatory; antipsoriatic; hypertenstive; dermatological; antithyroid; immunomodulator; vasotropic; antilipaemic; somatostatin agonist; Cushing's syndrome; gonadotropinoma;
                                                                                                                                                                                                                                                                                   Novel somatostatin agonist, useful for treating Cushing's syndrome, hyperparathyroidism, Paget's disease, hyperinsulinism, gastrinoma and Zollinger-Ellison syndrome, characterized by alkylation of amide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   71.2%; Score 57; DB 6; Length 8; 100.0%; Pred. The invention relates to novel somatostatin agonists, typically characterised by alkylation of the amide nitrogen, or its characterised by alkylation of the amide nitrogen, or its characterised by alkylation of the amide nitrogen, or its planmaceutically acceptable salt. The novel somatostatin agonist effect, by useful for binding one or more of human somatostatin agonist effect, by administering a somatostatin agonist or a pharmaceutically acceptable salt of it to a recipient in need of it. The somatostatin agonists are useful for treating a disease or condition in a human or other animal, including Cushing's syndrome, gonadotropinoma, hyperinsulinism, gastrinoma, paget a disease, VIPOma, nesidioblastosis, hyperinsulinism, gastrinoma, collinger-Bilison syndrome (AIDS) and other conditions, irritable bowel windome, pancreatitis, Crohn's disease, systemic selezosis, thyroid cancer, psorlasis, hypotension, panic attacks, scleroderma, small bowel obstruction, gastrossophageal reflux, duodenogastric reflux, Grave's disease, polycystic ovary disease, upper gastrointestinal bleeding, pancreatic pseudocysts, pencreatic ascites, leukaemia, meningioma, cancer cachexia, acromegaly, restenosis, hepatoma, lung cancer, melanoma, inhibiting the accelerated growth of a solid tumour and decreasing body of pancreatic cells, fibrosis, hyperingidaemia, hyperramylinaemia, hyperprolactinaemia and prolactinomas. This sequence represents a peptide of a somatostatin agonist compound of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                       Novel somatostatin agonist, useful for treating Cushing's syndrome, hyperparathyroidism, Paget's disease, hyperinsulinism, gastrinoma and Zollinger-Ellison syndrome, characterized by alkylation of amide
                                                                  /note= "C-terminal amide"

## Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- permanent accession numbers. The new UniProt record may not contain the previous temporary numbers from the most recent version of UniProt. These sequences have been assigned new Please note that the curators of the UniProt database have purged some temporary accession
- extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein If you encounter an accession number from an older search run against UniProt (results file Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

members of the public who may encounter UniProt temporary accession When submitting sequence search results for scanning into IFW, please include a copy of this attachment to agsist any future Examiners or numbers. THIS PAGE BLANK (USPTO)

-!- SUBCELLUDAR LOCATION: Microsomal.
-!- TISSUB SPROIPICITY: Widely expressed.
-!- SIMILARITY: Belongs to the UDP-glycosyltransferase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-I- FUNCTION: UDPGT is of major importance in the conjugation and subsequent elimination of potentially toxic xenobiotics and endogenous compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ..

Biochemistry 40.3869-3881 (2001).

-!- FUNCTION: UDPGTs are of major importance in the conjugation and subsequent elimination of potentially toxic xenobiotics and endogenous compounds. This isozyme has glucuronidating capacity with steroid substrates such as 5-beta-androstane 3-alpha,17-beta-diol, estradiol, ADT, eugenol and bile acids. Only isoform I seems to be active.

Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,
Actinopterygii, Neopterygii, Teleostei, Buteleostei, Neoteleostei,
Acanthomorpha, Acanthopterygii, Percomorpha, Tetraodontiformes;
Tetradontoidea, Tetraodontidae, Tetraodon.
-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
-!- TISSUE SPECIFICITY: Highly expressed in white matter in myelinating shark brain.
-!- SIMILARITY: Belongs to the myelin proteolipid protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13-SEP-2005 (TrEMBLrel. 31, Created)

Genoscope, Whitehead Institute Centre for Genome Research;
Submitted (FRB-2004) to the EMBL/GenBank/DDBJ databases.

L. CAUTION: The sequence shown here is darived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is preliminary data.

C. Preliminary data.
